

## WRAP INSTALLATION-DEALER REQUIREMENTS

### VEHICLE CONDITION:

- Vehicles must be washed (not waxed) and installation ready 24 hours prior to installers scheduled arrival.
- Any existing damage to vehicle should be repaired prior to wrap install.
- Vehicle should be free of pre-existing decals. If vehicle does have preexisting decals, the installer may be able to remove them, however, there is an additional charge based on the age and type of decal material to be removed.
- Incremental charges associated with ensuring the vehicle is install-ready are not eligible for Kubota co-op reimbursement.

### ADEQUATE INSTALLATION LOCATION:

- Dealer must provide an inside, climate controlled facility for graphic installation (wrap). Lack of indoor facilities can cause weather related delays which may result in additional charges such as, but not limited to, additional mileage or downtime charges.
- In some instances install may occur outdoors, however, this is not preferable as weather related issues such as wind, dust, rain or heat can affect installation.
- Additional charges due to weather related delays or facility rental fees are not eligible costs under the terms of this program

### VEHICLE ACCESS:

- Dealer will ensure that there is a 4' to 6' clearance around all sides of the vehicle for proper access for graphics installation.

### AFTER INSTALLATION:

- Dealer agrees that they will not wash the vehicle for at least 36 hours after installation to allow proper adhesion of graphics.
